

XIO FIELD NOTE

XIO acquisition operating system works because the owner stays visible.

Automation becomes useful when the decision record is as visible as the output.

THE PROBLEM

A polished output can still hide a weak workflow.

A person approves every external message and owns every exception.

THE OPERATING PATH

Make the handoff visible.

01 Rank the work

02 Prepare evidence

03 Route a review

04 Record the decision

HUMAN REVIEW

Keep responsibility explicit.

A person approves every external message and owns every exception.

INSPECTABLE PROOF

The operating system ranks accounts, prepares drafts, records decisions, and keeps external messages human-reviewed.

OPERATOR TAKEAWAY

**Automation becomes useful
when the decision record is as
visible as the output.**

Use the smallest test that can produce a decision record.
